THE #1 NEW YORK TIMES BESTSELLER

During World War II, America's fledgling aeronautics industry hired black female mathematicians to fill a labor shortage. These "human computers" stayed on to work for NASA and made sure America won the Space Race. They fought for their country's future, and for their share of the American dream. This is their untold story.

This is all the staff you need to process orders, produce invoices, check credit, check and analyse sales, check stocks, produce despatch notes and operate a computer.

INTERACT 75 makes it possible.
The Baric INTERACT 75 service gives you direct access to a major computer system from your own office. Easily, Quickly. And economically.

But the real advantage of INTERACT 75 is the fact that the computer you plug into is already programmed to carry out the day to day commercial processes involved in running your business. Like recording invoices. Issuing orders. Updating stock records. Checking customer credit limits. And calculating discounts.

In the opening phase of INTERACT 75 we are offering this Commercial Management Service to a limited number of customers.

These will probably be companies with about 200-2,000 personnel, selling from stock and coping with an invoicing problem.

Briefly, this is how it works. All your orders, from whatever source, are passed to the girl operator at your INTERACT 75 terminal. She transfers the order data to the computer, via the terminal. The computer immediately checks

all the data against permanent file information. If something is amiss, such as an item being out of stock, it advises her immediately. If not, her single entry starts a number of balls rolling. The computer records all the information on the user's private file: quantity, ledger entry, customer's name and address and so on, allowing for later detailed analysis for management reports, stock control, etc.

The computer then scans the file to prepare the invoice, noting any discount arrangements and adjusting the account. Within seconds it passes the information back to the user's office where it prints out the completed invoice automatically. The implications are obvious to every businessman.

Unfortunately we can only serve a few. So we would urge you to be quick about writing for details to Baric Computing Services Limited, 68 Newman Street, London W1P 4EH. An ICL/Barclays Company.

de larges systèmes technologiques

thomas hughes, 1989 | 'the evolution of large technological systems',
in bijker, w.e., hughes, t.p. pinch, t.j. *the social construction of
technological systems. new directions in the sociology and history of
technology.* (pp. 51-82) massachusetts: mit press

“les systèmes technologiques contiennent des composants
désordonnés, complexes et destinés à résoudre des problèmes.
ils sont à la fois construits socialement et façonnent la société.”

les infrastructures sont

- de « large technological systems » - inextricablement
reliés à d'autres acteur·rices et réseaux technologiques,
sociaux, politiques et économiques.
- conçus pour ne pas être visibles
- des technologies perfectionnées jusqu'à devenir
routinisées ; on ne les remarque qu'en cas de défaillance.

quand est une infrastructure ?

1.1. When is an Infrastructure?

“What can be studied is always a relationship or an infinite regress of relationships. Never a ‘thing.’ ” —Gregory Bateson

Yrjö Engeström, in his “When Is a Tool?,” answers the implied title question in terms of a web of usability and action (1990). A tool is not just a thing with pre-given attributes frozen in time—but a thing becomes a tool in practice, for someone, when connected to some particular activity. The article is illustrated by a photo of a

susan leigh star et karen ruhleder. “steps toward an ecology of infrastructure: design and access for large information spaces.” *information systems research*, vol. 7, no. 1, 1996, pp. 111–34.

l'infrastructure est un concept fondamentalement relationnel, elle devient infrastructure en relation avec des pratiques organisées. nous nous demandons donc quand, et non pas ce qu'est une infrastructure.

une infrastructure apparaît lorsque la tension entre le local et le global est résolue. autrement dit, une infrastructure apparaît lorsque les pratiques locales sont rendues possibles par une technologie à plus grande échelle, qui peut alors être utilisée de manière naturelle et immédiate. elle devient transparente à mesure que les variations locales sont intégrées dans les changements organisationnels

il ne s'agit pas d'un lieu physique ni d'un lieu permanent, mais d'une relation de travail

internet, l'infra- structure parfaite ?

réseau ferroviaire

réseau de fibre optique

à cet égard, l'internet mondial est l'infrastructure parfaite : il est omniprésent et invisible, partout et nulle part | grâce à lui, nous pouvons nous connecter à n'importe qui, n'importe où, depuis n'importe où, sans qu'il n'empiète sur notre réalité matérielle. | dans notre société postindustrielle, les technologies de l'information rendent les lieux et les espaces de plus en plus insignifiants | la distance n'existe plus, le monde est plat, l'unique est proche
